

Master-800 Centralized Dashboard

Master-800 provides a centralized dashboard to manage up to 999 battery banks per unit.

Optional 19" rack mounting

Contents

Key Features:.....	3
1. IP address setting.....	4
2. Battery Bank Configuration.....	5
2.1 Prepare Bank Settings.....	5
2.2 Upload Bank.csv to Master-800.....	7
3. Device Settings.....	9
Reference for Settings.....	10
4. Alarm Settings.....	11
5. Map View.....	14
6. Table View.....	15
7. Individual Bank View.....	16
8. Update and Add New Bank.....	17
9. Firmware Update Method-1 (AutoUpdate).....	18
10. Firmware Update Method-2 (Web Upload).....	19
11. SNMP Enable and Disable.....	21
12. Alarm Log file.....	22

Key Features:

- 1) Faster than PC software.
- 2) Automated pulling data from remote units in a network.
- 3) Analyze real-time data and present it on a summary table for all battery banks.
- 4) Generate alarms against set thresholds.
- 5) Highlight battery banks with SERVICE and UREGNT alarms.
- 6) Deliver alarm via email to multiple receipts.
- 7) Log and display recent 100 alarms.
- 8) Sort all battery banks with each column to prioritize service.
- 9) Access from anywhere in the same network with any web browser.
- 10) Allows multiple users at the same time without installation of software.
- 11) Easy to silence alarm for a battery bank for a known situation.

As BatteryDAQ continues to develop more convenient functions, user can upgrade firmware once new version is released.

1. IP address setting

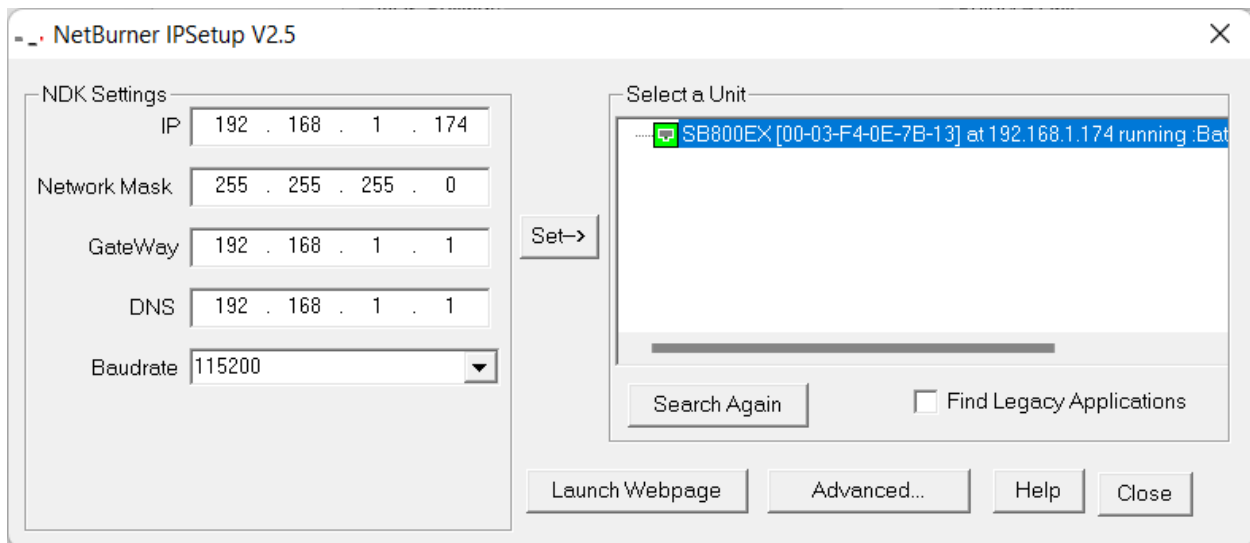

Download IpSetup.exe from BatteryDAQ website:

<https://batterydaq.com/tech/IpSetup.exe>

or

<https://batterydaq.com/tech/IpSetupV21.zip>

Connect the Master-800 unit to your network, power on the unit, Run IpSetup.exe to search for the unit.

Select/highlight the “BatteryDAQ Master800”.

Assign this unit a static IP. Set to correct Mask and Gateway.

Click “Set” to save to unit.

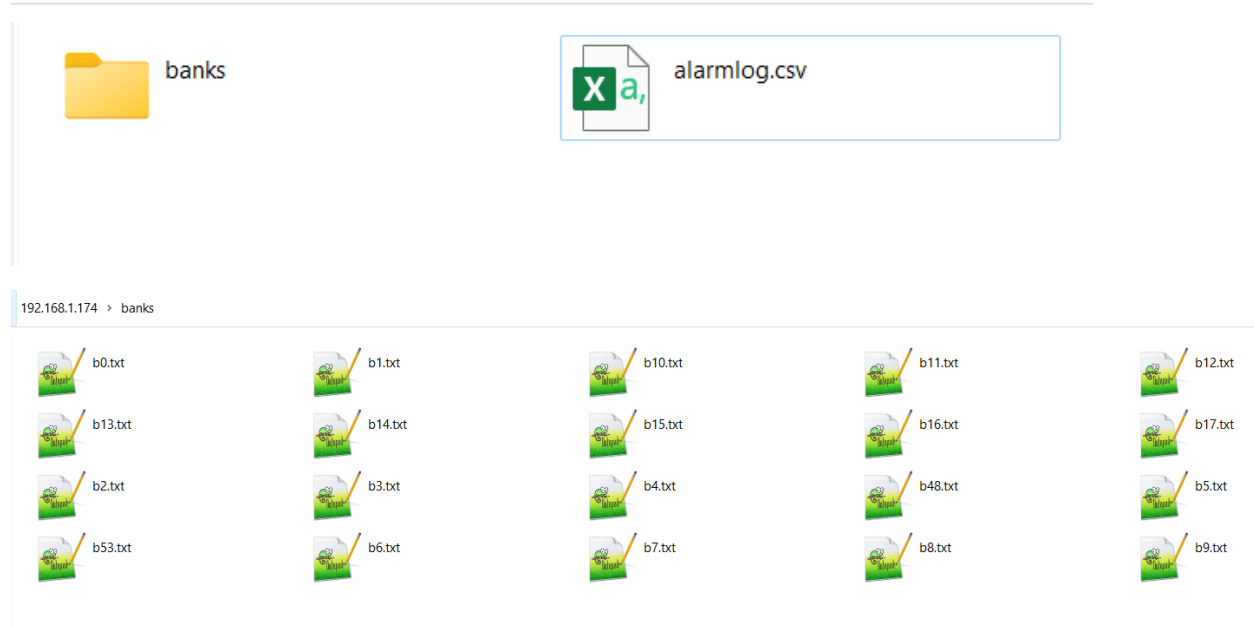

Wait for a minute, search again, it shall have the new IP settings.

2. Battery Bank Configuration

The configuration information for sites and battery banks can be managed as an Excel sheet "**Banks.csv**" on your local computer. If you have made any changes via Master-800 web interface, then you shall download an updated Banks.csv file from Master-800 and save it in local disk for backup.

The individual bank information is stored on SD card. .../banks/b*.txt. Each bank has its own b*.txt file. Those files can be accessed via ftp. FTP example: <ftp://192.168.1.16>

192.168.1.174

2.1 Prepare Bank Settings

Follow the template, to add/delete battery bank. Do NOT add/delete columns.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O
1	Silent	DTUID	Name	IP	MID	TCP	Battery#	AlarmType	lrBaseline	WireMode	Install	Model	Latitude	Longitude	Notes

Silent	DTUID	Name	IP	MID	TCP	Battery#	Alarm Type
0	12103	UPS-T1	192.168.1.9	1	1	40	6
0	12104	Substation-4	192.168.1.222	1	1	24	2
1	12105	Substation-5	71.166.97.202	1	1	24	2
0	12107	Substation-7	10.16.100.24	1	0	120	2
0	12107	Substation-8	10.16.100.25	4	0	180	2

Table continues with columns:

IrBaseline	Wire Mode	Install Data	Model	Latitude	Longitude	Notes
500	1	2012.08	SBS-190F	47.35919	-118.701	Note
300	2	2012.05	SBS-190F	42.23683	-88.608	Note
0	2	2012.12	SBS-190F	19.85211	-155.856	Note
400	2	2012.08	SBS-190F	19.48236	-154.882	Note
0	1	2012.12	SBS-190F	46.57867	-118.995	Note

This is a csv file so Name and any column other than Notes cannot have comma “,” in the content.

Silent	0 (Default) - Normal Notification; 1 - Alarm Notification Disabled. -1 for inactive bank, no data update, not listed on Concise View [For Oct-2022 or earlier version, this column was an index number. It must be corrected before upload to new version.]
DTUID	MID is the bank number (unit#) on DTU or matched MID on DAS software while using Modbus-TCP.
Name	Site and Battery Bank name, max 20 chars
IP	IPv4 address only
MID	unit ID on DTU (If utilize UDP, then it is the Modbus ID)
TCP	set to 1 (default) if you can access the Sentry units in your network. Otherwise set to 0 for receiving data from Sentry unit. In that case, the Sentry units need to set host IP as Master-800’s static IP.
Battery#	Max 240
Alarm Type	Keep consistent with the alarm type on Master-800 settings ../AlarmSettings.htm
IR Baseline	Set to 0 (Default) for using average, otherwise set to a value, minimum 30. No decimal, input 999 for 0.999mohm@2V and 9.99@12V
Wire Mode	1 - 1-wire mode; 2 - 2-wire mode with inter-cell connection resistance
Install Date	Input as a decimal between year and month, for example 2019.08
(Battery) Model	Max 20 chars
Latitude	GPS Latitude, check from Google Map if not available
Longitude	GPS Longitude
Notes	Notes is the last column; it can have comma in its content. Max 50 chars

Save Excel sheet as csv file for uploading.

2.2 Upload Bank.csv to Master-800

Navigate to Help page

BatteryDAQ™
Monitoring Solutions

Master-800 Dashboard

[Map](#) | [Table](#) | [Alarms](#) | [Settings](#) | [Help](#)

Site Configuration

The configuration information for sites and battery banks can be downloaded for backup and/or edit. ([Download Banks.csv](#))

To perform a batch update, prepare all sites/banks in csv file. The column heads (1st row) must be same as downloaded csv file.

Go to upload page [Upload Banks](#)

You may edit/update individual battery bank. Data/information will be saved in SD card. Download for backup if you made changes.

← → ↻ Not secure | 192.168.1.174/upload.htm

BatteryDAQ™ Master-800 Dashboard [Map](#) | [Table](#) | [Alarms](#) | [Settings](#) | [Help](#)

Upload csv file for Battery Banks

Download existing settings to backup before upload ([Download Banks.csv](#))

Select firmware file with the "Choose File" button below.

Click "Upload Banks" and wait for it to finish uploading.

IMPORTANT: The filename must be **"banks.csv"**.

Select firmware file: No file chosen

Only authorized person can upload settings for battery banks.

Wait for completion. Refresh webpage to check. It shall reflect the new configurations.

← → ↻ Not secure | 192.168.1.174/BANKPOST.htm

```

Web page will display the uploaded content. Click ← to go back and check the table. For Conside View, it only displays active banks. With Full Table view, it will display all banks including deactivated.

If the SNMP is enabled, you must restart DTU to update configuration. On [Settings](#) page, type Passcode **77882** to restart.

Wait for a minute, unit shall have new configuration loaded.

Bank settings and information can be updated online. (See details in “**Individual Bank View**”.)

5. Map View

All sites will be displayed on an interactive map with alarm status.

Please verify map function in your private network. If the map content is blocked by firewall, you cannot zoom into detail street map. Your IT may check the source code from the web page and unblock it.

Change GPS coordinates for Home and proper map depth to set the default view covering your site range.

41	Home Latitude	39.487320	<input type="text" value="39.487320"/>
42	Home Longitude	-76.660004	<input type="text" value="-76.660004"/>
43	Initial Zoom(5-18)	8	<input type="text" value="8"/>

6. Table View

The default home page displays all battery banks in a concise mode.

Each column can be clicked to sort with value.

If a remote unit is not communicating, it will show its IP address in RED. Otherwise it displays an icon to reflect the status Normal/Service Alarm/Urgent Alarm.

Concise Table View: it only displays important data and status

Full table view will display inactive sites as well. If you wish to activate a site, click on the first column on that row to access to that bank.

7. Individual Bank View

Individual bank data and settings can be viewed and updated.

Bargraph will change color for alarms.

8. Update and Add New Bank

Bank information can be updated online. You can also copy existing bank to add a new bank.

On table view, click on bar graph icon to access individual bank.

Battery Bank Info

Notes for this bank: Note

Enter Passcode:

Only authorized person can make changes. Obtain passcode from vendor.

Instructions

#	Set to different bank number to copy settings to it. Make sure not to overwrite other bank.
Silent	0 (Default) - Normal Notification; 1 - Alarm Notification Disabled; -1 for inactive bank, no data update, not listed on Concise View
TCP	0 - Passive UDP (for 3G/4G LTE IoT); 1 (Default) - Modbus-TCP Ethernet/Fiber; 2 - Serial RS485
Alarm(Type)	Keep consistent with alarm type settings
IR Baseline	Set to 0 (Default) for using average, otherwise set to a value, minimum 30. No decimal, input 999 for 0.999mohm@2V and 9.99@12V
Wire(Mode)	1 - 1-wire mode; 2 - 2-wire mode with inter-cell connection resistance
Install(Date)	Input as a decimal between year and month, for example 2019.08

Use passcode "7777" to update (or your own passcode if you have changed).

Go to "Help" page to download a banks.csv file to reflect the latest changes.

9. Firmware Update Method-1 (AutoUpdate)

Download software tool for firmware updates:

<https://batterydaq.com/tech/AutoUpdate.exe>

Run AutoUpdate.exe

Click "Find", or type in IP address.

Click "Browse" to choose the new s19 file. Open it.

Click "Update".

Wait a minute to complete. Unit will reset to start with new firmware.

10. Firmware Update Method-2 (Web Upload)

Firmware update can be done with web interface. No other tools are needed.

With web browser, access correct IP address, navigate to Settings page, scroll down, click Update Firmware.

Board will complete reboot in 6 seconds
[Go Back](#)

Click "Go Back", then click on Settings page, scroll down to check the firmware version.

In some cases, the device may need a power off/on.

11. SNMP Enable and Disable

SNMP shall be disabled if not using.

Update firmware with a version newer than March-30, 2022.

On SNMP Settings page, set #3 to 0 for disable with passcode **7777**. Check if the change is made correctly.

Power off/on unit to apply the change.

Use any SNMP test program to verify.

Enable it if needed, verify with SNMP test program.

[Server Settings](#) | [Alarm Settings](#) | **SNMP Settings**

SNMP is disabled. If need to enable it, set #3 to 1 and power off/on unit.

#	Description	Value	New Value
1	Location Name	Master-800 Dashboard	<input type="text" value="Master-800 Dashboard"/>
2	Community String	public	<input type="text" value="public"/>
3	SNMP Enable:1/Disable:0 Power off/on if changed	0	<input type="text" value="0"/>
4	Polling Port	161	(Do not change)
5	Version	SNMP V1	(Do not change)
6	Trap Recipient-1 IP	0.0.0.0	<input type="text" value="0.0.0.0"/>
7	Recipient-1 Port	162	<input type="text" value="162"/>
8	Trap Recipient-2 IP	0.0.0.0	<input type="text" value="0.0.0.0"/>
9	Recipient-2 Port	162	<input type="text" value="162"/>
10	Trap Recipient-3 IP	0.0.0.0	<input type="text" value="0.0.0.0"/>
11	Recipient-3 Port	162	<input type="text" value="162"/>
12	Trap Interval (minutes)	10	<input type="text" value="10"/>

Set Recipient IP to 0.0.0.0 to disable trap.

Enter Passcode:

Only authorized person can make changes. Obtain passcode from vendor.

Passcode 3333 to send a test trap

12. Alarm Log file

Alarm log file can grow fast in case some batteries frequently having alarm. The log file can be downloaded for archive. If it is too big, for example >100 MB, it will slow down the booting because it needs to read through to locate the recent 100 alarms.

Log file can be downloaded and cleaned.

To clean the alarm history log, go to settings page, use passcode "75750" to clean history.

Alarm Log file on SD card can be accessed with ftp.

192.168.1.174

On Alarms page, right click "Download Alarm Log" to save the csv file to local computer.
